PROFILE

Highly motivated, data-driven and passionate software engineer, committed to delivering quality, scalable and robust code. Social individual with an easy-going attitude and a get things done mentality.

WORK EXPERIENCE

Lead Software Engineer (Full Stack)
Jamjar S.A - Athens, GR

Nov 2018 - Present

Lead the operation of the development department. Architect, design and develop new features. Mentor new colleagues. Translate business requirements into specs. Work closely with the founders to plan for quarter goals. Convert KPI's into projects. Monitor web analytics data and provide custom reports. Identify customer needs and propose actions. Conduct researches to eliminate risk on crucial decision making times. Offer insights on organic growth strategies selection. Manage, lead and organize the agile development. Cover day-to-day needs.

Achievements:

- Deployed a bunch of interesting and challenging features like – A scoring mechanism that promotes popular and well-presented products on listing pages – A multi-factor product recommendation algorithm – The complete redesign of home page

- Increased Google's PageSpeed score by around 30 points on all pages by restructuring the frontend asset dependencies, lazy loading most images and reducing the server response time

- Resolved UX issues by analyzing user behavior data and discovering weak points

- Guided and coordinated a long-running strategic shift of the company's SEO approach in order bring more quality organic traffic to the platform

- Reduced the need for deadlines by breaking big features into smaller ones following agile methodologies (sprint planning, daily standups, retrospectives)

Technologies used:

`Ruby On Rails` `MySQL` `Elasticsearch` `jQuery` `SASS`

Software Engineer (Full Stack)
Jamjar S.A - Athens, GR

Sep 2017 - Oct 2018

Architect, implement and deliver quality features while keeping up with the deadlines. Active during the full lifecycle of the assigned projects. Gather and analyze requirements. Create wireframes for faster decision making.

Projects:

- Engineered a system that lets suppliers order packages from the platform and allows the company to manage and track their inventory

- Designed and architected a review mechanism allowing customers to rate suppliers

- Reconstructed, redesigned and migrated the platform messaging system from threads to conversations

- Refactored the in-house Elasticsearch implementation to be scalable and reusable
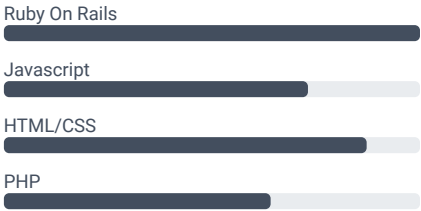

Technologies used:

`Ruby On Rails` `MySQL` `Elasticsearch` `jQuery` `SASS`
